

Brand Guidelines

The semantic switchboard for utility rate plan data

Mission & Brand Overview

Mission

Promote market competition, affordability, transparency, and innovation in the energy sector by introducing an open standard for the exchange and publication of machine-readable utility rate plan data.

Brand Traits

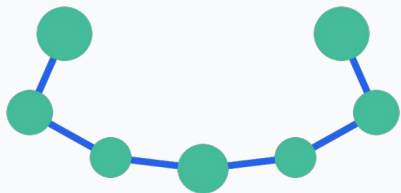

- | | | | |
|------------------------|-------------------------------|---------------------------|---------------------------|
| ● Transparent | Open data, clear structures | ● Modern | Semantic web technologies |
| ● Interoperable | Works across systems | ● Community-driven | Open collaboration |
| ● Trustworthy | Reliable, validated, governed | | |

Target Audience

Regulators · Software Developers · Utilities · Energy Service Providers · Researchers · Consumer Advocates

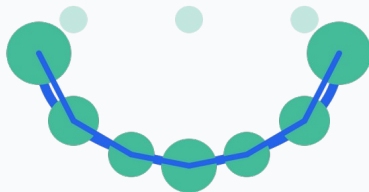

Logo Concepts

"Connected Smile" — nodes and edges forming a U-shape, representing rate plan data concepts connecting harmoniously.

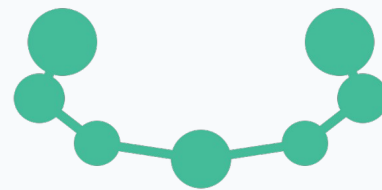

Option A: Simple

Teal nodes, blue edges

Option B: Switchboard

Grid motif with path

Option C: Minimal

Single color (teal)

Horizontal Logo with Wordmark

Terminology Standards

Consistent language builds recognition. Use these terms in all communications.

✓ Use	✗ Avoid
Rate plan	Rate, tariff, rate schedule
Rate plan data	Rate data, tariff data
Charge	Fee, cost component
Customer profile	Customer type, class
Eligibility rule	Qualification, requirement
NLR	NREL

Key Phrase

"URPX acts as the semantic switchboard for transforming flat rate plan data into structured rate plans with executable cost modeling instructions."

Voice & Tone

Clear

No jargon without explanation

Direct

Say what needs to be said

Confident

We know this problem well

Collaborative

Community-first approach

Pragmatic

Focus on real problems

Do

- Use "rate plan" consistently
- Acknowledge complexity honestly
- Focus on practical benefits

Don't

- Use "tariff" or "rate" alone
- Oversimplify (rate plans are complex)
- Use hyperbolic language

Boilerplate Text

One-liner (25 words)

URPX is an open standard for exchanging machine-readable utility rate plan data, enabling transparent energy pricing across the industry.

Short (50 words)

URPX (Utility Rate Plan Exchange) is an open standard for machine-readable utility rate plan data. Built on semantic web technologies, URPX acts as the switchboard for transforming flat rate plan data into structured formats with executable cost modeling instructions. Hosted by LF Energy Standards and Specifications.

Medium (100 words)

URPX (Utility Rate Plan Exchange) is an open standard that enables transparent, machine-readable utility rate plan data exchange. While standards exist for customer usage data and grid operations, no comprehensive standard previously existed for the rate plan data that determines how customers are charged. Built on W3C semantic web technologies (RDF, OWL, SHACL), URPX provides a rich ontology for representing everything from simple flat-rate plans to complex time-of-use structures. Led by Flux Tailor with NLR collaboration, URPX is hosted by LF Energy Standards and Specifications (LFESS).
